

Tyler Freemont

AI Systems Engineer — LLM Infrastructure, MCP & Automation

Native English · JLPT N1 · AWS Certified · Osaka-based, no visa sponsorship required

Osaka, Japan · tfreemont0712@gmail.com · 080-2345-4653 · tylerfreemont0712.github.io · github.com/tylerfreemont0712

SUMMARY

AI systems engineer building production LLM infrastructure — local inference (Ollama, llama.cpp), Model Context Protocol servers, RAG pipelines and multi-agent tooling — on top of an infrastructure background in carrier-scale network automation. Native English speaker with JLPT N1, working daily across bilingual engineering teams. AWS Certified Developer and Solutions Architect Associate. Resident in Japan with unrestricted work authorisation — no visa sponsorship required.

CORE SKILLS

AI / LLM systems: Local LLM deployment (Ollama, llama.cpp) · Model Context Protocol (MCP) servers · RAG / retrieval pipelines · LangChain · Multi-agent orchestration · Tool-calling & function calling · Prompt engineering · Model evaluation (RLHF) · Benchmarking · Qwen, DeepSeek, Gemma, gpt-oss

Programming languages: Proficient: Python, TypeScript, JavaScript, C++, C#, SQL, HTML/CSS · Working knowledge: Go, Rust

Infrastructure & backend: Linux · Docker · AWS · CI/CD · REST API design · Network automation · TCP/IP · Fault detection & auto-recovery · Git

Frontend & applications: React · PyQt6 · HTML5 Canvas · SaaS product development

Languages: English (native) · Japanese (JLPT N1) — technical documentation, client-facing meetings, and EN↔JP technical translation

CERTIFICATIONS

AWS Certified Developer – Associate · AWS Certified Solutions Architect – Associate · JLPT N1 (Japanese Language Proficiency Test, highest level) · Google IT Support Professional Certificate

EXPERIENCE

Software Engineer, AI Systems

Mar 2026 – Present

MiraX · Osaka, Japan (Remote)

- Built the company's local LLM inference layer (Ollama, llama.cpp) behind internal API endpoints, moving enterprise workloads off external model providers and keeping customer data in-house.
- Designed and hardened 3 Model Context Protocol (MCP) servers now in production use by the company's internal local LLM deployment — including a company-document server with full Japanese filesystem and Unicode handling, and a bilingual EN/JA web-search service.
- Shipped RAG retrieval, tool-calling and multi-agent workflows (LangChain) into an enterprise SaaS platform spanning video conferencing, translation and records management.
- Benchmarked and integrated open-weight models (Qwen, DeepSeek, Gemma, gpt-oss) against production latency and quality requirements; ran the internal evaluation gating AI feature releases.
- Delivered backend and frontend features across Python, C++, C#, TypeScript and JavaScript in a small, fast-moving startup team.

AI Evaluation Specialist (Code & Math)

Jan 2024 – Present

Outlier / Alignerr · Remote (Freelance)

- Produce RLHF preference data and detailed written technical justifications used directly in frontier-model training pipelines.
- Evaluate and rank model outputs for correctness, reasoning quality and instruction-following across Python, JavaScript/TypeScript, C++ and general computer-science tasks.

- Assess agentic outputs — multi-step reasoning chains, tool-use and function-calling behaviour — against production engineering standards.

Software / Infrastructure Engineer

Sep 2023 – Feb 2026

Neighbors Inc. · Osaka, Japan

- Built Python automation tooling and internal services for enterprise network clients including Rakuten Mobile and Daikin.
- Designed and implemented a fault-detection and auto-recovery service covering 10,000+ network nodes, converting operator-driven incident recovery into an automatic path.
- Developed configuration-management tooling that replaced manual per-device changes across the managed fleet.
- Built and maintained deployment pipelines and worked with network engineers on topology design.
- Stack: Python, Linux, network automation, CI/CD.

EN↔JP Technical Translator

Apr 2022 – Dec 2023

Freelance · Osaka, Japan

- Translated IT and infrastructure documentation between English and Japanese, supporting multinational engineering teams on technical specifications and system design.

SELECTED PROJECTS

LLM Council — Multi-Agent Autonomous Build System

Python

- Orchestrates specialised AI agents through a shared tool layer to autonomously build working HTML5 Canvas browser games end to end.
- Implements filesystem access, web search, asset retrieval, hot-reloading and structured inter-agent messaging, with AST-level code validation and runtime tool generation.

Local LLM Desktop Toolkit

Python, PyQt6, llama.cpp, Whisper

- Launcher and management tooling for running llama.cpp servers locally, paired with a WASAPI loopback audio recorder and Whisper transcription pipeline.

LocalSync — Desktop Productivity App

Python, PyQt6, SQLite

- Task and goal management application with local SQLite storage and an AI-driven step-by-step tutoring panel.

EDUCATION

Portland State University — B.A., Japanese Language & Culture / Communications · Portland, Oregon, USA

Clackamas Community College — Mathematics, C++, Programming Fundamentals · Oregon, USA
